

Solar photovoltaic power generation for night use

Overview

They have developed a technology that enables solar panels to generate electricity even at night. This innovation uses a natural process called radiative cooling, where heat from the Earth's surface escapes into space on clear nights. Amid that strong trend, solar energy stands out with over 32,000 megawatts of. For years, solar panels have helped us capture the sun's power during the day to reduce electricity bills and support renewable energy. But what if we told you that researchers have now found a way to generate electricity even after the sun goes down?

Thanks to a groundbreaking development in LAGOS - Scientists at Stanford University have made a groundbreaking discovery that could change how we use solar energy.
