

Solar power generation also uses batteries

Overview

Solar batteries store excess electricity produced by solar panels so it can be used at the homeowner's convenience later on. This function allows solar panels - which famously only produce electricity when the sun is shining - to effectively provide round-the-clock clean energy. Sometimes two is better than one. Coupling solar energy and storage technologies is one such case. The reason: Solar energy is not always produced at the time. While solar panels have long been at the heart of clean energy systems, pairing them with solar generators and solar batteries can elevate your energy system to a fully sustainable level.
