

Solar power generation giant wings

Overview

At altitudes of up to 750 meter, these extremely robust kites spin in “figures of eight” loops while connected to a ground station via a cable winch. The resulting traction force is converted into clean energy by a generator on the ground. Finally, a solar generator with 3-phase power and a portable design. Moving constantly higher and lower, almost like a yo-yo. Ireland has become a testing ground for an innovative type of airborne wind power that could provide more sustainable electricity with less steel and civil engineering work than a turbine. It's portable, quick to deploy, and designed for islands and remote areas. Picture a large kite soaring high. Dr.
