

# Sparks coming out of the energy storage closing cabinet

## Overview

---

Swift action is essential to avoid the risks of electrical fires or shocks. Safety should always come first! Look out for repeated sparks or buzzing sounds. Discoloration or scorch marks are a red flag. But here's the shocking truth: over 60% of lithium battery-related fires occur in energy storage systems, according to recent industry reports [1]. With global energy storage capacity projected to. Battery Energy Storage Systems, or BESS, help stabilize electrical grids by providing steady power flow despite fluctuations from inconsistent generation of renewable energy sources and other disruptions.
