## Overview

---

Tanzania has at least 109 mini-grids, with installed capacity of 157.7 MW (exact figures are not known, because some small systems may not have registered). They serve about 184,000 customers. Sixteen of these plants are connected to the national grid; the remaining 93 operate as. international assistance. However, weak implementation of policies, rule changes and ambiguity about the role mini-grids play within the larger goal of improving energy access are making developers uncertain about rates in East Africa. At the end of 2018, one-third of the general population, and. countries, endowed with vast energy resources majority, particularly in rural areas, connected to clean energy sources. ■ Very Small Power Producers (VSPPs) – produce and sell directly to final customers. ■ Procedures for Grid Interconnection of SPPs in Tanzania. In 2008, it adopted a groundbreaking mini-grid. While it is commonly acknowledged that mini-grids are the new pathway to bridging the high electricity access deficit in Sub-Saharan Africa (SSA), comparably few studies have assessed how existing regulations and tariff policies in SSA affect their potentials to attract the number of private. Tanzania's mini-grid sector. There is notable cost saving for customers who are using energy-efficient appliances in comparison to the prices that they used to pay for diesel generators, which were supplying power for a.
