

The inverter has high power but the appliance has low power

Overview

To prevent damage to the inverter, battery, or connected equipment, the inverter automatically shuts down when overloaded, serving as a protective measure. To fix this: Decrease the load; Unplug devices or appliances to lower power demand. An inverter converts direct current (DC) power, like from a car battery or solar panels, into alternating current (AC) power that can be used to run standard electrical devices. This blog post. Let's examine the causes of inverter failures and 32 methods for remediation. How to distinguish between heavy failure and light failure?
