

The long side of the photovoltaic panel faces south

Overview

Solar panels should face true south, not magnetic south. Use NOAA's magnetic declination calculator to find your local value and adjust accordingly. Tilt angle describes the vertical angle of your panels relative to the ground, measured in degrees from horizontal. Arrays that are appropriately oriented can improve energy output by up to 30% or more ². However, factors such as roof slope and proximity to the equator may have some homeowners considering other directions (including north). The optimal direction for solar panels to face is generally south in the Northern Hemisphere, as this orientation maximizes sunlight capture throughout the day, potentially increasing energy generation by up to 20%. The article supports this by discussing case studies and expert insights that. The orientation of PV panels—the direction they face on the roof—has a significant impact on annual energy production, shading, and system economics.

The long side of the photovoltaic panel faces south

Solar panel orientation

In the northern hemisphere, the general rule for solar panel placement is, solar panels should face true south (and in the southern, true north). Usually this is the best direction because solar panels will

...

Best Direction for Solar Panels to Maximize Savings -- SolarReviews

Best Solar Panel Direction For Every Goal
Best Solar Panel Direction Overall
South to Southwest Is Best For Tou Rates
How Much Does Solar Panel Direction Impact output?
What If Your Roof Doesn't Face South?
Does Solar Panel Angle Matter?
How to Calculate Output on Your Roof Based on Its Direction
South is the best direction for solar panels to face overall. In nearly all situations, you will see the greatest utility bill savings and quickest payback period if your panels point south instead of in another direction. South-facing panels have superior economics for the following reasons: 1. They generate more solar energy 2. They allow you to See more on solarreviews

Photovoltaic Roof Panels Most Often Face Which Direction

For fixed-tilt residential PV systems, facing panels toward true south minimizes the loss of solar energy over the year. The sun travels from east to west across the southern sky, delivering ...

Solar Panel Orientation Guide

When it comes to solar panel orientation, the general rule is that south-facing panels are ideal. This orientation ensures maximum exposure to sunlight throughout the day, as the sun's path ...

Does My Roof Have to Face South for Solar? , Home Solar

101

For homes in the northern hemisphere, south-facing solar panels do receive the most direct sunlight throughout the year. However, a south-facing roof is by no means a necessity for a productive and

...

Best Direction for Solar Panels to Maximize Savings -- SolarReviews

In the United States, the best direction for solar panels to face is south as it exposes them to the most sun and allows them to produce the most electricity possible. Solar panels that face east or west will ...

Which Direction Do Photovoltaic Roof Panels Most Often Face

This article explains why south-facing orientations are commonly preferred in the United States, how east/west or tilted arrays perform, and what factors influence final system design for ...

What Direction Should Solar Panels Face? Understanding

the Basics ...

The optimal direction for solar panels to face is generally south in the Northern Hemisphere, as this orientation maximizes sunlight capture throughout the day, potentially increasing energy generation ...

Maximize Efficiency: Best Direction for Solar Panels , Sunrun

Situated north of the equator (which puts the sun on the south side of houses), homeowners have the best opportunity to cover their power usage, top off batteries, and maximize ...

Solar Panel Orientation: Everything You Need to Know

Proper solar panel orientation simply means that your solar panels are south-facing if you are in the northern hemisphere and north-facing if you are in the southern hemisphere.

Solar Panel Direction & Orientation: 2025 Complete Guide

Solar panels should face true south, not magnetic south. The difference between these directions, called magnetic declination, can vary by up to 30 degrees depending on your location.
