

# The photovoltaic bracket can be drilled on site

## Overview

---

All components are pre-cut and pre-drilled for easy on-site assembly, improving installation efficiency and saving time and labor costs in large-scale solar farm construction. The installation selection of photovoltaic ground brackets is mainly based on factors such as the fixing method of the bracket, terrain requirements, material selection, and the weather resistance, strength, and stiffness of the bracket. First, there are many fixing methods, such as pile foundation. The ground solar bracket installation system is designed to be suitable for solar farms with cement pier bases and ground screw pile bases. The drilled shaft or borehole is filled with high-strength cement grout or concrete. What are the differences between drilled shaft and helical piles?

What equipment options are available for their i other critical factor in selecting the type of pile. Projects requiring high load.
