Overview

Solar panels installed by professionals will not cause your roof to leak. To prevent any leaks, special water-tight flashings are installed under the shingles or over the metal sheeting and the bolt holes are sealed with sealant. This eliminates the potential for water to leak into. Installing solar panels on your roof is a significant step toward energy independence. Yet, the success of this investment rests heavily on the quality of the installation. From roof damage to weight concerns, we will cover it all. In fact, they can provide added protection from UV rays, hail, and extreme weather.
