

The role of container base stations

Overview

These crucial hubs allow for the collection of smaller shipments from multiple sources to be grouped into a single container. These hubs make Less-than-Container Load (LCL) shipping possible by organizing goods and preparing them for transport. Through consolidation and deconsolidation processes, Container Freight Stations ensure orders reach the right doors at the right. CFS, or “Container Freight Stations,” aid in the consolidation of smaller shipments, or Less Container Load (LCL), and thus play an important role in the containerized shipping process. The global container total is set to grow to 20 million units by 2025.
