## Overview

---

A solar voltage regulator is a device used to prevent batteries from overcharging. Solar panels convert sunlight into usable electrical energy — but to truly understand how that energy flows, you need to grasp one fundamental concept: voltage. Also, it regulates or controls the voltage coming from the solar panel to the batteries and electronics. Regulators otherwise known as solar controllers are a big part of a solar panel set-up, especially for whole-house and commercial units. But what do we use solar panels for and why do we need to regulate their voltage?

Although solar power similar to what we use today has been around for sixty years, it wasn't until the. Choosing the right voltage regulator is essential for protecting batteries and maximizing solar energy harvest. Each product section includes practical features, installation.
