

What is a Korean communication base station

Overview

A BTS is central to wireless communication, making sure network coverage is effective. At the heart of BTS operations lie crucial components. Base station (or base radio station, BS) is - according to the International Telecommunication Union 's (ITU) Radio Regulations (RR) [1] - a " land station in the land mobile service. " A base station is called node B in 3G, eNB in LTE (4G), and gNB in 5G. Equipped with an electromagnetic wave antenna, often placed on a tall mast, the base station enables communication between mobile terminals (such as mobile phones or pagers). A base station represents an access point for a wireless device to communicate within its coverage area. It usually connects the device to other networks or devices through a dedicated high bandwidth wire of fiber optic connection.
