

# What is the voltage difference of solar panels

## Overview

---

These solar panel voltages include: Nominal Voltage. This is the maximum rated voltage under direct sunlight if the circuit is open (no current running). Solar panels are composed of multiple photovoltaic (PV) cells, typically made from silicon. Each cell acts as a semiconductor, converting light energy into electrical energy. The voltage output of a single solar cell under Standard Test Conditions (STC) is approximately 0. In simple terms, it's the force that pushes electric current through a circuit. It could be anywhere between 21.
