

Why base stations are not equipped with solar energy

Overview

The primary reason many stations refrain from utilizing solar panels is economic viability, 2. limited space availability can compromise installation feasibility, 3. maintenance and technical know-how are essential but lacking in many. Under normal circumstances, communication base stations usually adopt a hybrid system of solar and wind energy for energy storage. This article presents an overview of the state-of-the-art in the design and deployment of solar powered cellular base stations.
